

Collecting
biosamples + data in
a study context or for
a register?

TTU topics

Storing valuable
biosample collection
in your freezer /
biobank?

Need more/other
biosamples + data
for your analyses?

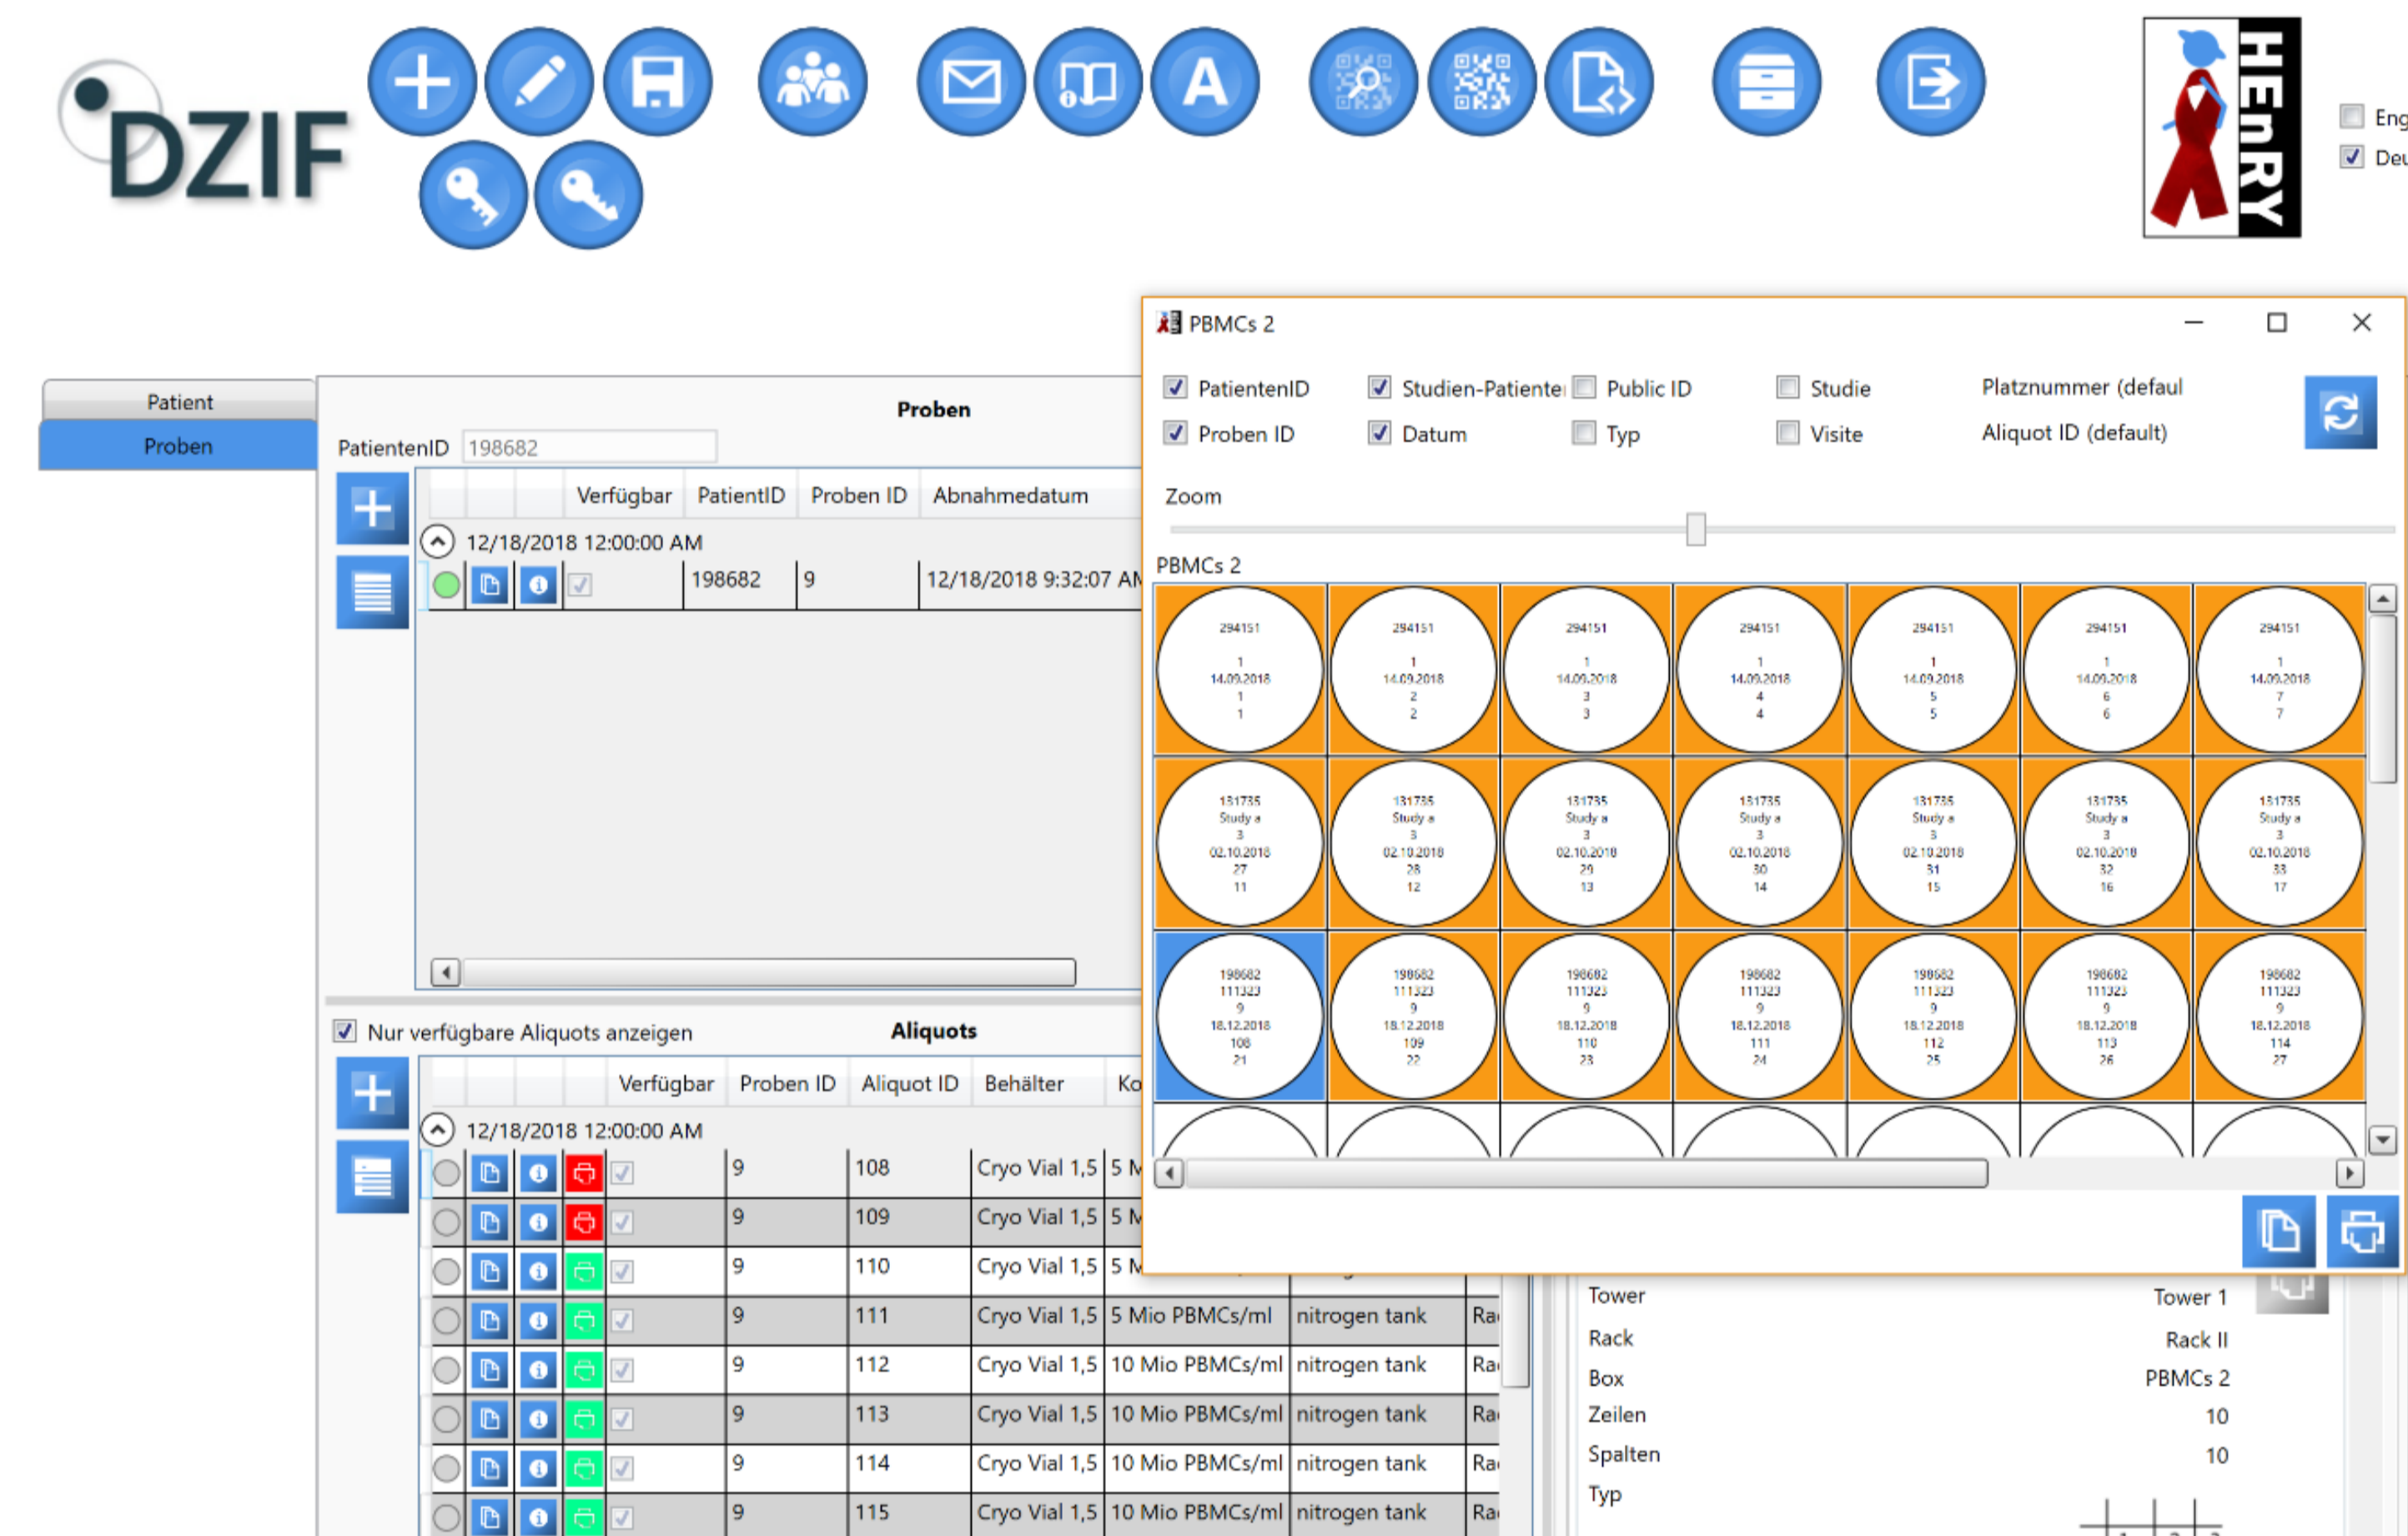

Do you like to
have new
collaboration
projects
with sharing
biosamples +
data?

Use the Open Source tools of the TI BBD

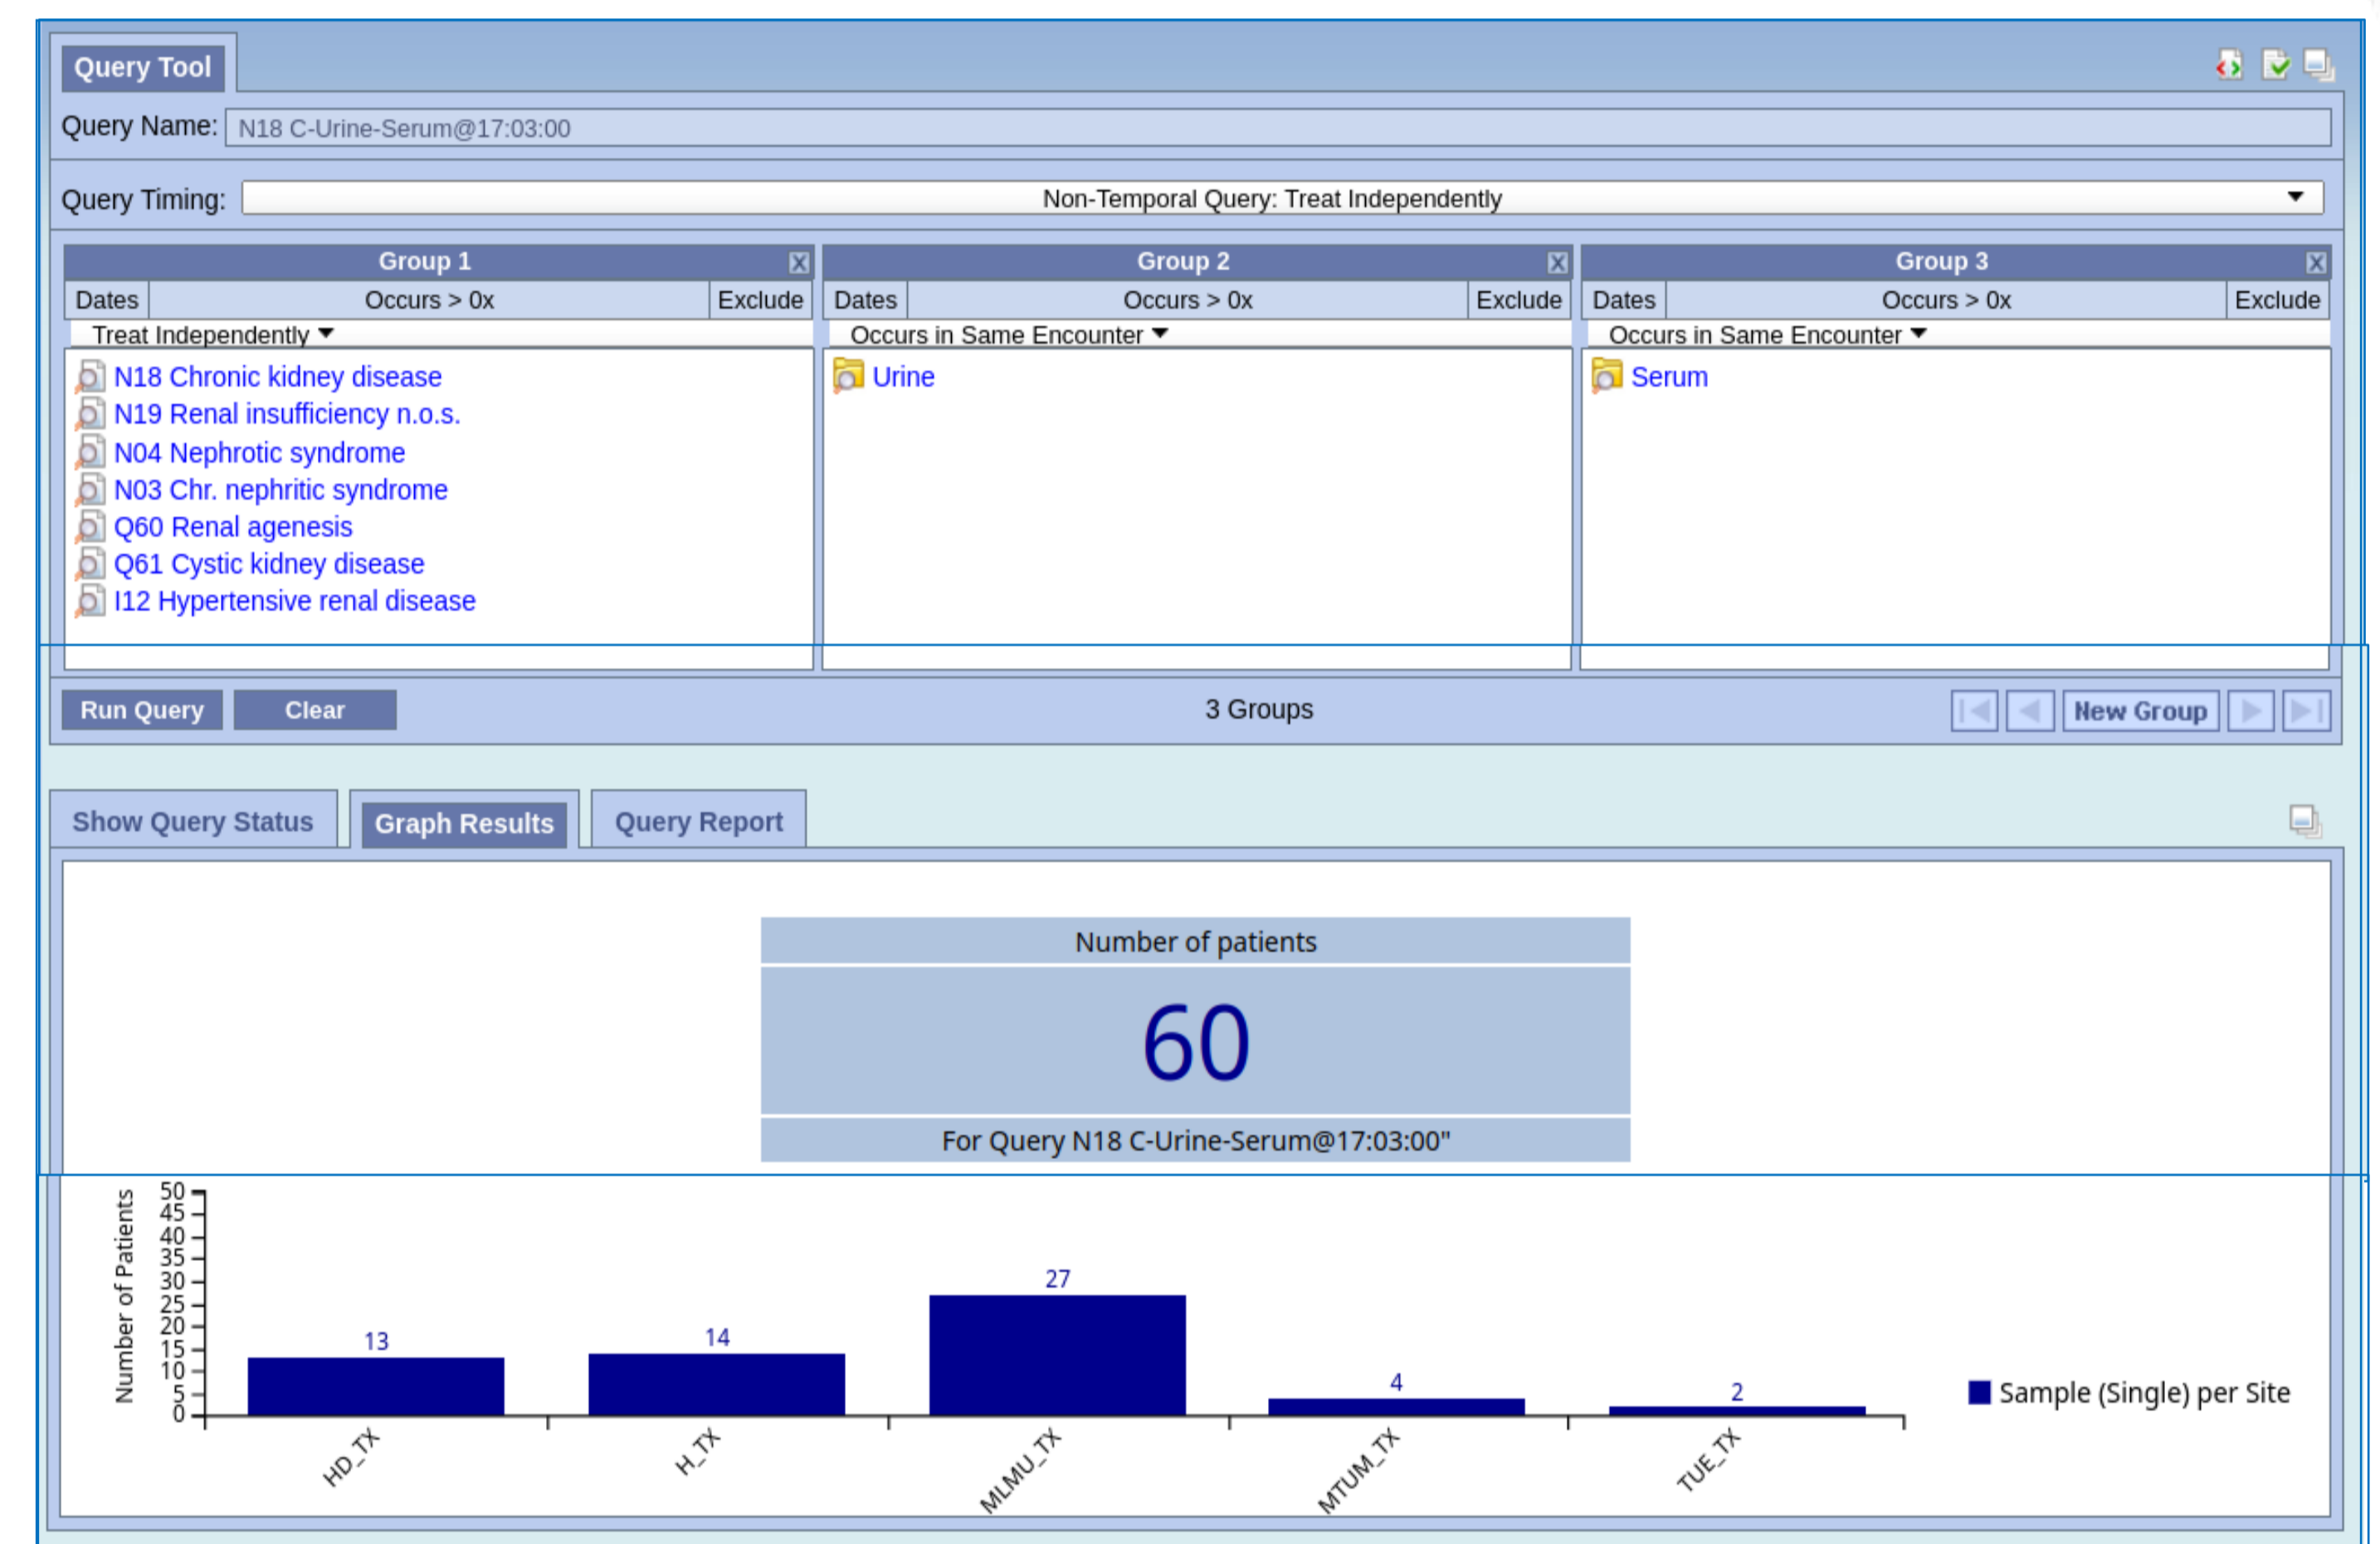

HENRY

(HIV Engaged Research Technology)

DZIF-ZBR

(Central Biosample Register)

HENRY offers the following features:

- Management/documentation of biomaterial, processing and storage
- One-click applicable drawing schemes
- Customizable laboratory journal
- Virtual view inside boxes
- Customizable labels with unique identification -> Quick Response (QR) code labels
- Centralized management of the practical laboratory part, e.g. pre-documentation of multicentre studies and SOPs
- Many search and reporting functions with export of the results as CSV
- Preparation of shipments, including documents to be added to shipments
- **Support of biomaterial data transmission to the DZIF-ZBR**
- and many more...

DZIF-ZBR features include:

- Log-in via Single-Sign-On (SSO, in plan)
- Quick search queries for biomaterials incl. complex AND / OR options
- Search functions with export of the results as CSV
- Multiple TTU-related biosample collections available -> **be part and make your biosamples visible!**
- Cooperation with HENRY software for easy data management and automated sending of relevant data items

YOUR ADVANTAGES:

- Improved cooperation due to better traceability of biosamples across studies and sites
- Individual support also for complex questions (e.g. feasibility studies)
- Improved data quality through harmonisation, data analysis and data cleaning

In future: embedding in DZIF IT infrastructure

- Cross-service navigation with common header
- Central user administration with Single-Sign-On (UK Cologne)

Partner sites: Munich, Cologne
